

Intuitive, Integrated EDIS

## Simplifying Operations for Freestanding EDs

CMR offers freestanding EDs an intuitive documentation system with advanced, comprehensive functionality including clinical decision support and risk-management tools. Its browser-based solution minimizes the need for on-site IT resources — including personnel and hardware — resulting in reduced costs and a quick return on investment.

CMR's proven solutions and extensive training program optimize workflow efficiencies and throughput to effectively improve staff productivity, reduce documentation errors and track patient activity. CMR is offered as both a local server or offsite hosting model. CMR's hosted model and per-chart pricing virtually eliminate upfront costs and lessen the burden placed on IT resources.

### CMR enables freestanding EDs to:

- Increase net revenue
- Deliver reduced patient turn-around time
- Simplify operations
- Decrease cost of EMR implementation
- Minimize the demands on IT resources
- Improve patient satisfaction
- Trend and analyze patient data

CMR offers a flexible price structure and first-class technical support that includes hands-on assistance with server installation, network setup and ongoing server maintenance.

CMR integrates with in-house lab instruments for computerized physician order entry and lab results, and offers a registration system specifically created for the freestanding environment.

# CMR Product Summary

## Tracking

- Patient Tracking
- Maximum communication between clinicians evaluating the same patient
- Visual indicators showing patients, pending orders, and overall ED status at a glance
- Integrated environment for managing patient care
- Flexibility for printing specific elements of the patient chart without printing the entire chart
- Filtering by department and by specialty (for patients with consultations)
- Whiteboard search capability using text strings (partial names)
- Census monitoring by department and by ED sub unit
- Resource management (e.g., placing rooms on hold for EMS)
- Temporary room creation (e.g., hall1, hall2)
- Manual loading of patients using the HIS bypass application allowing continued use of CMR during HIS downtime procedures or unplanned network outages

## Clinical Documentation

- Triage Notes
- Nursing Documentation
- Physician Documentation
- Ancillary Services Documentation

## Charge Capture

- Facility Charge Capture
- Professional Fee Coding Report

## Image Capture

- Scanning and Attaching Embedded Forms
- Patient ID and Insurance Cards
- Anatomical Diagrams
- ECGs
- EMS Run Reports
- Photographs

## Order Management

- Order Entry - Lab/Radiology/Cardio/Respiratory/Meds and IVs

## Medication Management

- Allergy and Drug/Drug Interaction Checking
- Medication Reconciliation

## Discharge Planning

- Discharge Instructions
- Prescriptions
- School/Work Excuse
- Transition Summary

## Electronic Signature Requirements

- Ensures all signatures for orders are present
- All orders are acknowledged and resulted

## Comprehensive Documentation Compliance

- Configurables for facility to ensure compliance with Quality measures
- HPI, PFSH, ROS and PE are completed with required level of documentation
- Never requires a chart to be returned for completion
- Start and Stop times for IVs captured

## Reporting

- Enhanced Audit Trail
- More than 90 standard reports
- Standard and Custom Reports
- Meaningful Use Reporting

## Interfaces

- ADT/Patient Demographics
- Bi-directional Lab and Radiology Orders
- Cardiology Orders
- Continuity of Care Document (CCD)

For customers who wish to obtain meaningful use certification with CMR EDIS v3:

Support for integration of this certified product-version with a hospital's lab in order to meet *§170.314(b)(5) – Incorporate Lab Tests & Values/Results* may require additional one-time costs.

Meaningful use compliance for the above measure is included in our standard lab integration package.
